Many Illegal Maneuvers Are Made on One-Way Streets

the intersection of Shoshone street and Second avenue Trailing at the intersection of Students and Second avenue west illustrates one of the problems involved in driving on one-way sizets. Drivers who intend to drive straight through the intersection should use the center lane, but often they drive in a turn lane, depriving a driver who wants to turn of his turn at the traffic intersection the light had changed and he had to wait through another light change. This is just one of the things that slows traffit on the one-way street. Frank Barnett, city police traffic licu tenant, explains there are several lilegal maneuvers that are com

There is no law that says a driver has to, but if the driver is going straight down the street, it certainly facilitates traffic if he will drive in the center lane."

drive in the center lane."

There is another situation that has arisen with the advent of one-way traffic, according to Barnett. He says drivers misunderstand the proper method to turn from a two-way street and join a one-way traffic pattern. They usually don't turn into the correct lane.

When a driver turns into a one-way street he should enter the closest lane of traffic. This way he doesn't have to cross any lanes, he simply has to enter a

A driver across the street, who also wants to turn on Main avenue, should turn into the right lane, the closest lane to the curb. Neither driver should enter the center lane, or cross the center lane.

The rule of thumb here is to enter the lane closest to you when you turn into a one-way street. Barnett says too many drivers turn into the center lane, or cross the first lane and the center lane and enter the far

Jaw of Deer, Elk Studied by Game Biologist

This knowledge helps game management workers determine the rate of growth and response of the animals to natural changes. There is no change in teeth after the animal has reached 18 months

to 2 years of age except, of course in wear. In wildlife, age-ratios are a good indicator of reproduction and mortality. Fish scales exhibit annual growth rings similar to those seen in cross section of trees, Backbones tell story for fish with no scales, (Fish and game department photo-staff engraving)
